Nota: índice de variabilidad es la desviación estándar. Valores de variabilidad (Hoja y Planta) superiores al 10% indican una condición de foco. índice de variabilidad menor a 10% y severidad (Hoja y Planta) mayor al 30% indican epidemias establecidas regionalmente de intensidad moderada a alta.

* Las variables de hojas con roya y fenología se evalúan quincenalmente; Guiones corresponden a semanas no evaluadas.
